

Understood. I combined the **original Additional Functional Requirements** with the **Gross Receivables / Collectible Receivables / Bad Loan Receivables recommendation** and also incorporated the recommendation to separate **Loan Status** and **Loan Classification**.

I structured it as a single specification document that you can directly provide to your AI code editor.

Loan Tracking System - Additional Functional Requirements Specification

3.1 Customer Management

Customer Information

The Customer screen shall allow users to create, edit, search, and manage borrower records.

Customer fields:

- Customer Code (auto-generated)
 - Full Name
 - Nickname / Alias
 - Contact Number
 - Address
 - Notes
 - Date Created
 - Active / Inactive Status
-

Customer Documents Management

The system shall support uploading one or more customer documents.

Examples:

- Valid ID
- Business permit
- Agreement documents
- Photos
- Other supporting documents

Requirements

- Allow multiple file uploads
- Supported file types:
 - JPG
 - PNG
 - PDF
- Store documents directly in MS SQL Database using VARBINARY(MAX)
- Do not store files in the server file system

Document metadata:

- Document ID
- Customer ID
- Original File Name
- File Type
- File Size
- Upload Date
- Uploaded By

Actions:

- View document
- Download document
- Delete document

Customer Screen Layout Recommendation

Use a modern responsive layout with sections and tabs instead of a long single-page form.

Recommended layout:

=====

Customer Information

Name:

Nickname:

Contact:

Address:

=====

Customer Financial Summary

Active Loans
Gross Receivables
Collectible Receivables
Bad Loan Receivables

=====

Tabs

| Loans | Documents | Notes |

=====

Loans Tab

Display customer's loan history.

Columns:

- Loan #
- Loan Date
- Principal
- Outstanding Balance
- Due Date
- Loan Status
- Loan Classification

Clicking a loan should navigate to the dedicated Loan Details page.

Do not display loan details in a popup because payment and extension history can become large.

3.2 Loan Management

Create New Loan

When creating a new loan, the following fields shall be available.

Loan Fields

- Loan Number (auto-generated)
- Customer
- Principal Amount
- Loan Date
- Due Date

- Interest Rate
 - Interest Amount
 - Remarks
-

Default Values

When adding a new loan:

Field	Default Value
Loan Date	Current Date
Due Date	Loan Date + 60 days
Interest Rate	3%
Interest Amount	Automatically calculated

Loan Field Override

The user must be able to manually override:

- Loan Date
- Due Date
- Interest Rate
- Interest Amount

Reason:

There are cases where customers pay early and the lender may provide a goodwill discount by reducing interest.

The system must allow editing of these fields after loan creation.

Loan Details Page

Opening a loan should navigate to a dedicated page.

Do not use modal dialogs.

Recommended layout:

=====

Loan Header

Loan # LOA00025

Customer:
Juan Dela Cruz

Principal:
25,000

Outstanding Balance:
12,500

Due Date:
September 15, 2026

Status:
Active

[Edit Loan]
[New Payment]
[New Extension]
[Generate SOA]
[Change Classification]

=====

Tabs

Overview | Payments | Extensions | Documents | Audit Log

=====

Overview Tab

Display:

Loan Information:

- Loan Date
- Due Date
- Principal Amount
- Interest Rate

- Interest Amount
 - Total Extension Charges
 - Total Payments
 - Outstanding Balance
 - Loan Status
 - Loan Classification
-

Payments Tab

Display all payments.

Columns:

- Payment Date
- Amount
- Payment Method
- Running Balance
- Remarks
- Actions

Actions:

- Edit
- Delete

Footer:

- Total Payments
-

Extensions Tab

Display loan extensions.

Columns:

- Extension Date
- New Due Date
- Additional Interest
- Additional Charges
- Remarks
- Actions

Actions:

- Edit

- Delete

Footer:

- Total Extension Charges
-

Statement of Account (SOA)

The system shall generate a PDF Statement of Account per loan.

The PDF should contain:

Customer Information

- Customer Name
- Address
- Contact Number

Loan Information

- Loan Number
- Loan Date
- Due Date
- Principal Amount
- Interest Rate
- Interest Amount

Extension History

- Extension Date
- Additional Charges
- Additional Interest
- New Due Date

Payment History

- Payment Date
- Payment Amount
- Running Balance

Summary

- Principal Amount
- Interest Amount
- Extension Charges
- Total Amount Due
- Total Payments

- Outstanding Balance
 - Loan Status
 - Loan Classification
-

Loan Status and Classification

Do not use only a "Bad Loan" checkbox.

Separate Loan Status and Loan Classification.

Loan Status (System Managed)

Automatically determined by the system.

Values:

Status	Description
Active	Loan is current
Overdue	Loan passed due date
Fully Paid	Balance is zero
Written Off	Removed from active collection

Loan Classification (User Managed)

Manually assigned by the lender.

Values:

Classification	Description
Normal	Expected to be collected
Watch List	Possible collection issue
Bad Loan	High risk / unlikely collection

Example:

Loan Status:
Overdue

Loan Classification:
Bad Loan

means the loan is overdue and considered unlikely to be collected.

Financial Calculation Rules

Outstanding Balance

For each loan:

```
Outstanding Balance =  
Principal Amount  
+ Interest Amount  
+ Extension Charges  
- Total Payments
```

Dashboard Receivable Calculations

Gross Receivables

Includes all outstanding loans except Written Off loans.

Formula:

```
Gross Receivables =  
SUM(  
Principal Amount  
+ Interest Amount  
+ Extension Charges  
- Total Payments  
)
```

Includes:

- Active loans
 - Overdue loans
 - Bad Loans
-

Bad Loan Receivables

Formula:

```
Bad Loan Receivables =  
SUM(  
  Outstanding Balance  
WHERE Loan Classification = 'Bad Loan'  
)
```

Collectible Receivables

Formula:

```
Collectible Receivables =  
Gross Receivables  
-  
Bad Loan Receivables
```

This represents the expected collectible amount.

Dashboard Summary Cards

Display:

Gross Receivables

Collectible Receivables

Bad Loan Receivables

Active Loans

Overdue Loans

Written-Off Loans

Loans Due This Week

Loan List Screen

Columns:

- Loan #
- Customer
- Loan Date
- Due Date
- Principal
- Interest Amount
- Extension Charges
- Total Payments
- Outstanding Balance
- Loan Status
- Loan Classification
- Actions

Loan Number Format:

LOA00001
LOA00002
LOA00003

Format:

Prefix: LOA
Running Number: 5 digits

Loan Grid Footer Totals

Display totals:

- Total Principal
- Total Interest
- Total Extension Charges
- Total Payments
- Total Outstanding Balance

Loan Search and Filtering

Provide filtering options:

- Loan Number
- Customer Name
- Loan Date Range

- Due Date Range
- Loan Status
- Loan Classification

Special filters:

- Show Bad Loans Only
- Show Overdue Loans Only

3.3 Loan Extension Management

When adding an extension:

Default:

Extension Date = Current Date

Allow override.

Fields:

- Extension Date
- New Due Date
- Additional Interest
- Additional Charges
- Remarks

Actions:

- Add
- Edit
- Delete

After saving:

Automatically update:

- Loan Balance
- Due Date
- Extension Charges

3.4 Payment Management

From the Loan Details page, provide:

[New Payment]

button.

Payment fields:

- Payment Date
- Amount
- Payment Method
 - Cash
 - GCash
 - Bank Transfer
 - Other
- Reference Number
- Remarks

Default:

Payment Date = Current Date

Allow override.

Actions:

- Add Payment
- Edit Payment
- Delete Payment

After payment:

Automatically:

- Recalculate Outstanding Balance
- Update Loan Status
- Refresh loan summary

Additional Recommendation: Loan Ledger

Implement a loan transaction ledger to maintain complete financial history.

Every financial movement should create a transaction record.

Example:

Date	Transaction	Debit	Credit	Balance
Aug 1	Loan Released	10,000		10,000
Aug 1	Interest Added	300		10,300
Sept 5	Payment		2,000	8,300
Sept 30	Extension	150		8,450
Oct 10	Payment		1,000	7,450

Benefits:

- Accurate Statement of Account generation
- Easier auditing
- Supports future features
- Prevents balance calculation errors

This version should work well as a **single prompt/specification document for your AI coding editor** because it includes the business rules, UI expectations, calculations, and future-proofing recommendations in one place.
