

Yes, I agree with removing **Total Revolving Funds** and **Outstanding Principal** from this page. They belong better on the Dashboard/Loans screens. The Cash Ledger should stay focused on one question: “**What cash do I currently have, and what caused it to change?**”

I'd redesign it like this:

Top summary area

Use one prominent but relatively compact **Cash on Hand** card instead of three large cards.

CASH ON HAND	As of Aug 12, 2026
₱52,389.00	
Available cash based on all recorded cash transactions	
This Month:	Cash In ₱18,450 Cash Out ₱10,000 Net +₱8,450

I would still show **Cash In / Cash Out / Net Change** underneath the total, but as secondary information rather than separate summary cards. Those numbers are useful for understanding why Cash on Hand changed.

Transaction controls

Immediately below the summary:

Cash Transactions [+ Add Cash Transaction]

[Search reference or remarks...] [Transaction Type ▼]

[Start Date — End Date] [Clear] [Apply] [Export]

For **Transaction Type**, I would use:

- All Transactions
- Payment Received
- Loan Release
- Cash Deposit / Capital Added
- Cash Withdrawal
- Expense
- Adjustment

This will become more useful as your business grows because not every cash movement will necessarily come from loans.

Cash transaction table

I would modernize the existing table to:

Date	Transaction	Reference	Cash In	Cash Out	Running Balance	Remarks
Aug 11, 2026	Payment Received	LOA00009	₱190.00	—	₱52,389.00	Loan payment

Date	Transaction	Reference	Cash In	Cash Out	Running Balance	Remarks
Aug 11, 2026	Loan Release	LOA00009	—	₱10,000.00	₱52,199.00	Loan released
Aug 9, 2026	Payment Received	LOA00008	₱1,030.00	—	₱62,199.00	Full payment

I strongly recommend separating your existing **Amount** column into **Cash In** and **Cash Out**. It makes a cash ledger much easier to scan than using `+190` and `-10,000`.

The **Running Balance** is also worth adding. This is probably the most valuable improvement to the page because it allows you to immediately see how every transaction affected your cash position.

Footer

At the bottom of the currently filtered transactions:

TOTALS	₱18,450.00	₱10,000.00
Net Cash Movement:		+₱8,450.00

These totals should correspond to the selected date range/filter, while the **Cash on Hand at the top always represents the current overall cash balance**.

Automatic vs manual transactions

I would visually distinguish system-generated transactions from manually entered ones.

For example:

- **Payment Received** — automatically created from Payment Management
- **Loan Release** — automatically created when a loan is released
- **Cash Deposit** — manually entered
- **Expense / Withdrawal** — manually entered
- **Adjustment** — manually entered

I would also prevent users from editing or deleting an automatically generated **Payment Received** or **Loan Release** transaction directly from the Cash Ledger. Those should be changed from the corresponding Loan/Payment record so the ledger cannot get out of sync.

For manually entered transactions, the `:` menu can contain **Edit** and **Delete**.

Overall layout

So the page becomes much simpler:

CASH & FUNDS		
CASH ON HAND		
₱52,389.00		
Cash In this month	Cash Out this month	Net Change

P18,450	P10,000	+P8,450	
---------	---------	---------	--

CASH TRANSACTIONS

+ Add Cash Transaction

[Search.....]

[Type ▼] [Date Range] [Clear] [Apply] [Export]

Date	Transaction	Reference	Cash In	Cash Out	Balance
Aug 11	Payment Received	LOA00009	P190		P52,389
Aug 11	Payment Received	LOA00009	P190		P52,199
Aug 11	Loan Release	LOA00009		P10,000	P52,009
...					
TOTAL			P18,450	P10,000	

Showing 1-25 of 142

Items per page 25

1 2 3 ... >

This would also make the page visually consistent with the **Customers, Loans, and Dashboard layouts** we've been designing, while making the Cash Ledger more useful as an actual financial ledger rather than just another summary page.
